React Project Setup with Vite

- Create project using Vite:
- npm create vite@latest nextbuy
- cd nextbuy
- npm install
- Install Tailwind CSS with Vite plugin:
- npm install tailwindcss @tailwindcss/vite
- Configure Tailwind in vite.config.js
- Install Tailwind pre-defined components:
- npm install @headlessui/react
- npm install @heroicons/react
- Install React Router:
- npm install react-router-dom
- Install Redux Toolkit and React Redux:
- npm install @reduxjs/toolkit react-redux
- Install FontAwesome (for icons):
- npm install --save-dev @fortawesome/fontawesome-free
- Import in app.jsx: import '@fortawesome/fontawesome-free/css/all.min.css';
