■ Easy React + Vite + Tailwind Setup

1. Create a new React project

```
npm create vite@latest nextbuy
```

2. Go inside the project and install

```
cd nextbuy npm install
```

3. Add Tailwind CSS

```
npm install tailwindcss @tailwindcss/vite
```

4. Connect Tailwind in vite.config.js

```
Open vite.config.js and add Tailwind plugin
```

5. (Optional) Install ready-made UI tools

```
npm install @headlessui/react npm install @heroicons/react
```

6. Add Routing (for multiple pages)

```
npm install react-router-dom
```

7. Add Redux Toolkit (for state management)

```
npm install @reduxjs/toolkit react-redux
```

8. Add FontAwesome (for icons)

```
npm install --save-dev @fortawesome/fontawesome-free In App.jsx: import
'@fortawesome/fontawesome-free/css/all.min.css';
```

■ Run your project

```
npm run dev
```
